

Larry Hogan, Governor - Boyd K. Rutherford, Lt. Governor - Dennis R. Schrader, Secretary

April 14, 2017

Public Health Preparedness and Situational Awareness Report: #2017:14 Reporting for the week ending 4/08/17 (MMWR Week #14)

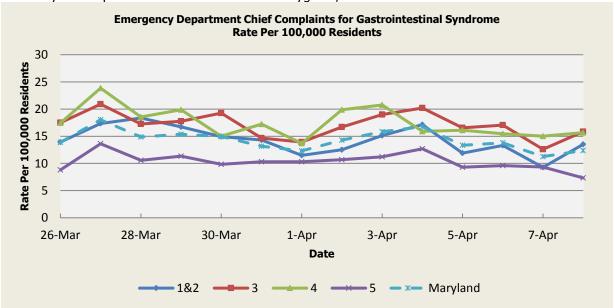

CURRENT HOMELAND SECURITY THREAT LEVELS

No Active Alerts National:

Level Four (MEMA status) **Maryland:**

SYNDROMIC SURVEILLANCE REPORTS

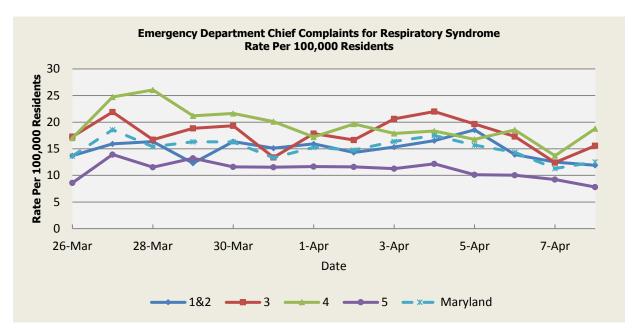

ESSENCE (Electronic Surveillance System for the Early Notification of Community-based **Epidemics):** Graphical representation is provided for all syndromes (excluding the "Other" category; see Appendix 1) by Health and Medical Regions (See Appendix 2). Emergency department chief complaint data is presented as rates per 100,000 residents using data from the 2010 census. Electronic Surveillance System for the Early Notification of Community-Based Epidemics (ESSENCE). Baltimore, MD: Maryland Department of Health and Mental Hygiene; 2017.

There were two (2) Gastroenteritis/Foodborne outbreaks reported this week: one (1) outbreak of Gastroenteritis in an Assisted Living Facility (Region 5); one (1) outbreak of Gastroenteritis/Foodborne associated with a restaurant (Region 3).

| | Gastrointestinal Syndrome Baseline Data January 1, 2010 - Present | | | | | | |
|---------------|---|----------|-------|-------|-------|--|--|
| Health Region | 1&2 | Maryland | | | | | |
| Mean Rate* | 12.97 | 15.19 | 15.51 | 10.36 | 13.18 | | |
| Median Rate* | 12.91 | 12.95 | | | | | |

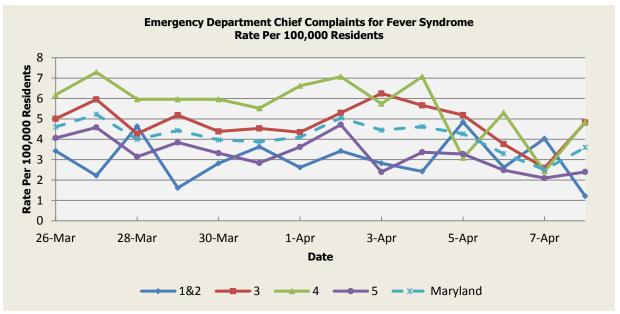

^{*} Per 100,000 Residents

There were four (4) Respiratory illness outbreaks reported this week: one (1) outbreak of Influenza in a Nursing Home (Regions 1&2); one (1) outbreak of Influenza in an Assisted Living Facility (Region 4); one (1) outbreak of ILI/Pneumonia in a Nursing Home (Region 3); one (1) outbreak of Pneumonia in a Nursing Home (Region 5).

| | Respiratory Syndrome Baseline Data January 1, 2010 - Present | | | | | | | | | |
|---------------|---|----------|-------|-------|-------|--|--|--|--|--|
| Health Region | 1&2 | Maryland | | | | | | | | |
| Mean Rate* | 12.11 | 14.53 | 14.42 | 10.02 | 12.59 | | | | | |
| Median Rate* | 11.70 | 13.85 | 13.91 | 9.65 | 12.03 | | | | | |

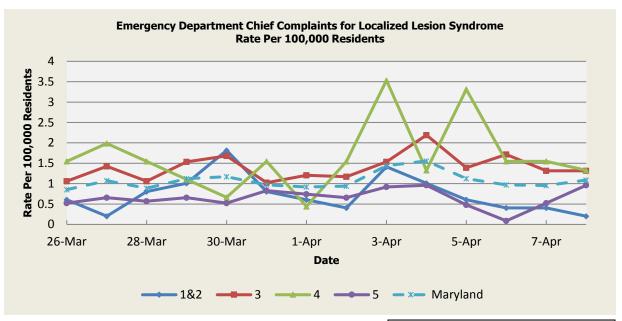

* Per 100,000 Residents

There were no fever outbreaks reported this week.

| | Fever Syndrome Baseline Data January 1, 2010 - Present | | | | | | | |
|---------------|---|------|------|------|----------|--|--|--|
| Health Region | 1&2 | 3 | 4 | 5 | Maryland | | | |

NEDSS data: Maryland National Electronic Disease Surveillance System (NEDSS). Baltimore, MD: Maryland Department of Health and Mental Hygiene; 2017. ‡ Counts are subject to change *Timeframe of 2011-2015**Includes January through current month. *** As of February 24, 2017, the total Maryland Confirmed and Probable Cases of Zika Virus Disease and Infection is 164.

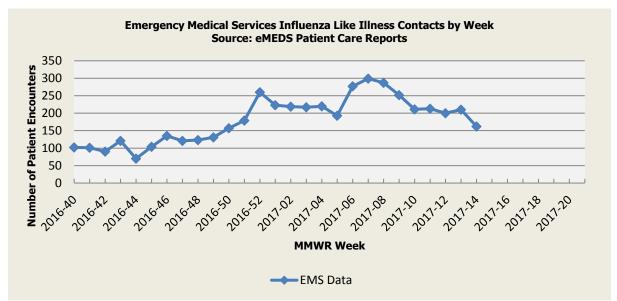

SYNDROMIC INFLUENZA SURVEILLANCE

Seasonal Influenza reporting occurs from MMWR Week 41 through MMWR Week 20 (October through May). Seasonal Influenza activity for Week 14 was: Regional Geographic Spread with Low Intensity.

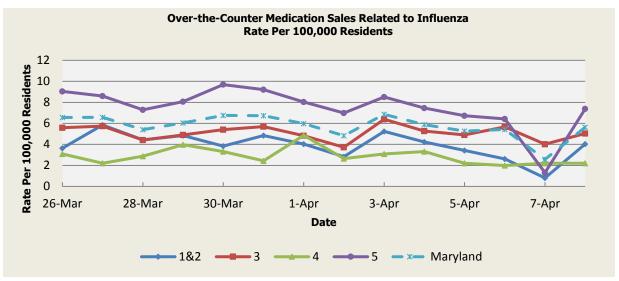

| | | Influenza-like Illness Baseline Data Week 1 2010 - Present | | | | | | | |
|---|---------------|---|--------|--------|--------|----------|--|--|--|
| | Health Region | 1&2 | 3 | 4 | 5 | Maryland | | | |
| ı | Mean Rate* | 250.82 | 334.70 | 307.06 | 290.47 | 308.70 | | | |
| Ī | Median Rate* | 7.66 | 9.61 | 9.05 | 8.47 | 9.00 | | | |

* Per 100,000 Residents

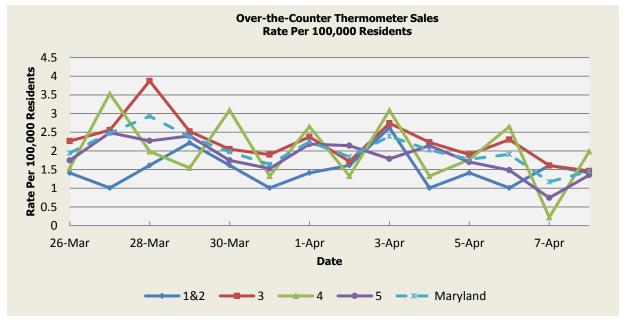

Disclaimer on eMEDS flu related data: These data are based on EMS Pre-hospital care reports where the EMS provider has selected "flu like illness" as a primary or secondary impression of a patient's illness. This impression is solely based on the signs and symptoms seen by the provider, not on any diagnostic tests. Since these numbers do not include all primary or secondary impressions that may be seen with influenza the actual numbers may be low. These data are reported for trending purposes only.

There was not an appreciable increase above baseline in the rate of OTC medication sales during this reporting period.

| | OTC Sales Baseline Data January 1, 2010 - Present | | | | |
|---------------|--|------|------|------|----------|
| Health Region | 1&2 | 3 | 4 | 5 | Maryland |
| Mean Rate* | 3.80 | 4.94 | 2.75 | 8.50 | 6.04 |
| Median Rate* | 3.23 | 4.42 | 2.43 | 8.08 | 5.54 |

* Per 100,000 Residents

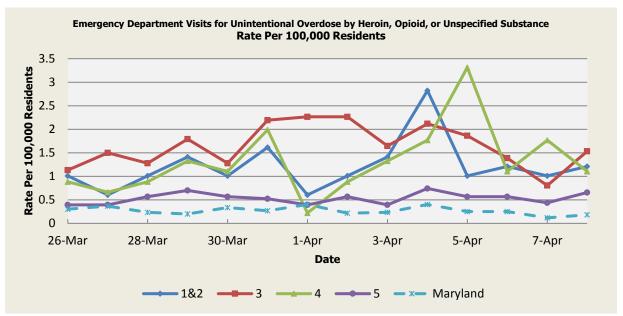

There was not an appreciable increase above baseline in the rate of OTC thermometer sales during this reporting period.

| | Thermometer Sales Baseline Data January 1, 2010 - Present | | | | |
|---------------|--|------|------|------|----------|
| Health Region | 1&2 | 3 | 4 | 5 | Maryland |
| Mean Rate* | 3.39 | 3.25 | 2.51 | 4.35 | 3.63 |
| Median Rate* | 3.02 | 3.03 | 2.43 | 4.06 | 3.36 |

* Per 100,000 Residents

SYNDROMIC OVERDOSE SURVEILLANCE

The purpose of this section is to characterize non-fatal ED visit trends for acute unintentional overdose by Heroin, Opioid or Unspecified substance among Maryland residents captured by ESSENCE data, including chief complaint and discharge diagnosis. ED visits that are identified as unintentional overdose by Heroin, Opioid or Unspecified substance include those with medical and non-medical use of a prescription Opioid or where the substance is not specified, given evidence that the majority of fatal overdoses are Opioid-related.

Disclaimer on ESSENCE Overdose related data: ESSENCE chief complaint and discharge diagnosis query for overdose-related illness includes but is not limited to the following terms: heroin, opioid, speedball, dope, fentanyl, naloxone, narcan, and overdose.

| | Non-fatal Overdose ED Visit Baseline Data January 1, 2010 - Present | | | | |
|---------------|--|------|------|------|----------|
| Health Region | 1&2 | 3 | 4 | 5 | Maryland |
| Mean Rate* | 0.33 | 0.42 | 0.37 | 0.15 | 0.30 |
| Median Rate* | 1.01 | 1.32 | 1.10 | 0.48 | 0.97 |

* Per 100,000 Residents

PANDEMIC INFLUENZA UPDATE / AVIAN INFLUENZA-RELATED REPORTS

WHO update: The current WHO phase of pandemic alert for avian influenza is ALERT. Currently, the avian influenza H5N1 virus continues to circulate in poultry in some countries, especially in Asia and northeast Africa. This virus continues to cause sporadic human infections with some instances of limited human-to-human transmission among very close contacts. There has been no sustained human-to-human or community-level transmission identified thus far.

Influenza A (H7N9) is one of a subgroup of influenza viruses that normally circulate among birds. Until recently, this virus had not been seen in people. However, human infections have now been detected. As yet, there is limited information about the scope of the disease the virus causes and about the source of exposure. The disease is of concern because most patients have been severely ill. There is no indication thus far that it can be transmitted between people, but both animal-to-human and human-to-human routes of transmission are being actively investigated.

Alert phase: This is the phase when influenza caused by a new subtype has been identified in humans. Increased vigilance and careful risk assessment, at local, national and global levels, are characteristic of this phase. If the risk assessments indicate that the new virus is not developing into a pandemic strain, a de-escalation of activities towards those in the interpandemic phase may occur. As of <u>March 30, 2017</u>, the WHO-confirmed global total (2003-2016) of human cases of H5N1 avian influenza virus infection stands at 856, of which 452 have been fatal. Thus, the case fatality rate for human H5N1 is approximately 53%.

AVIAN INFLUENZA:

LPAI H7 AVIAN INFLUENZA (GEORGIA): 27 March 2017, A flock of chickens in a Chattooga County commercial farm tested positive for a low-pathogenic strain of the avian flu, reports the state Department of Agriculture. It is the 1st confirmation of bird flu in commercial poultry in Georgia.

The entire flock was depopulated as a precaution, although Agriculture Commissioner Gary Black's office said no infected animals entered the food chain, and this strain of the avian flu does not threaten the food supply. Read More: https://www.promedmail.org/post/4932500

HUMAN AVIAN INFLUENZA:

H7N9 AVIAN INFLUENZA (CHINA): 12 April 2017, At the end of the week ending 5 April 2017, 10 confirmed cases were reported - 8 male, 2 females - with one fatality. Five of these 10 cases presented with severe pneumonia. No close contacts [have] shown ILI [influenza-like illness] symptoms so far and live poultry markets were closed though patients reported no clear history of live poultry contact. Read More: https://www.promedmail.org/post/4962707

[There were no reports of human cases of avian influenza in the United States at the time that this report as compiled.]

NOTE: This weekly review is a compilation of data from various surveillance systems, interpreted with a focus on a potential BT event. It is not meant to be inclusive of all epidemiology data available, nor is it meant to imply that every activity reported is a definitive BT event. International reports of outbreaks due to organisms on the CDC Critical Biological Agent list will also be reported. While not "secure", please handle this information in a professional manner. Please feel free to distribute within your organization, as you feel appropriate, to other professional staff involved in emergency preparedness and infection control.

For questions about the content of this review or if you have received this and do not wish to receive these weekly notices, please e-mail us. If you have information that is pertinent to this notification process, please send it to us to be included in the routine report.
